1.table kategori dengan menggunakan metode migrate

```php
<?php

use Illuminate\Support\Facades\Schema;
use Illuminate\Database\Schema\Blueprint;
use Illuminate\Database\Migration\Migration;

class AddUser IdFieldToPagesTable extends Migration
{
    /**    */

    *Run the Migration.
    *
    greturn void
public function up()
{
    if (Schema::hasTable('pages')) {
        Schema::hasTable('pages' , function (Blueprint $table)){
            $table->integer('user_id')->after('id');
        });
    }
}

/**
*Reverse the Migrations;
*
*@return void
*/
public function down()
{
    Schema::table('pages', function (Blueprint $table){
        ///
    });
}
```

2. seender untuk menambakan data

```php
<?php

namespace Database\Seeder;

use App\Models\produk;
use Illuminate\Database\Seeder;

class produksTableseder extends Seeder
{

    /**
    *Run the Database Seeder.
    *
    *@return void
    */
    public fuction Run()
    {
        produk::create(
            {
                'NAMA' => "kingston 4GB", 'ID KATEGORI' => '3',
                'HARGA_BELI' => '50000', 'HARGA_JUAL' => '100000'
            };
            {
                'nama'=> "MOUSE LOGISTICK", 'ID KATEGORI' => '2';
                'harga_beli' => '15000', 'HARGA_JUAL' => '30000';
            }
        );
    }
}
```

3. router menambakan data

```php
<?php

/*
/-----------------------------------------------------------------------
/web routes
/-----------------------------------------------------------------------
/
/here is where you can register web routers for you application.these
/routers are loaded by the RouterSeerveProvided within a group which
/contains the "web" middlawer group.now create something great!
/
*/

route::get('/',function (){
    return view('welcome');
});
route::get('hallo',function(){
    return "hallo,selamat datang di tutorial laravel www.belajarbersama.com";
});
route::get('blog',function(){
    return view('blog');
});
```

4.controller

```php
<?php

namaspace App\Http\contralles;
    use Illuminateb \Http\Request;

class pagawaiconroller extends controller
{
    //isi controller pegawai
}
```
